Measurement of top quark properties in single top production at CMS

Thursday, 3 July 2014 15:20 (15)

Single top topologies are exploited for studies of top quark properties. This includes the first measurement of single top polarization in the t-channel production mode in pp collisions, which directly confirms the V-A nature of the tWb production vertex. W-helicity fractions are measured in the phase space sampled by a selection optimized for t-channel single top production, orthogonal to the $t\bar{t}$ final states used in traditional measurements of these properties. Anomalous couplings of the top quark are searched in t-channel single top production with a NN-based analysis.

Summary

Primary author(s) : MEYER, Arnd (RWTH Aachen University)

Presenter(s) : Dr. YAZGAN, Efe (Ghent University)

Session Classification : Top-quark and ElectroWeak Physics

Track Classification : Top-quark and ElectroWeak Physics
