## Measurement of VZ production cross sections in VZ to Vbbbar decay channels in pp collisions at 8 TeV from CMS

*Saturday, 5 July 2014 10:25 (15)*

We present a measurement of the WZ and ZZ production cross sections in proton-proton collisions at 8 TeV in final states where one Z boson decays to b-tagged jets, while the other gauge boson, either W or Z, is detected through its leptonic decay. The results are based on data corresponding to an integrated luminosity of 18.9 /fb collected with the CMS detector at the Large Hadron Collider.
