Design to Realization of the International Linear Collider: ILC

Saturday, 5 July 2014 15:00 (25)

The International Linear Collider (ILC) has been proposed for a next generation, energy frontier, e+e- colliding accelerator. The Technical Design Report (TDR) was published in 2013, and the project is getting into the transition of the “Design to Realization” stage. The report will describe the ILC accelerator design and technology as well as future prospect of the project anticipated to be hosted in Japan and to be realized with a global cooperation project.

Summary

Primary author(s) : Prof. YAMAMOTO, Akira (KEK/CERN)

Presenter(s) : Prof. YAMAMOTO, Akira (KEK/CERN)

Session Classification : Accelerator Physics and Future Colliders

Track Classification : Accelerator Physics and Future Colliders
