## Combined results of the 126 GeV Higgs boson couplings using all decay channels measured by the CMS detector

*Friday, 4 July 2014 15:35 (20)*

The combination of the coupling results of all Higgs boson decay channels measured at CMS is presented. The analysis is based on pp collision data collected at centre-of-mass energies of 7 and 8 TeV corresponding to integrated luminosities of 5/fb and 20/fb respectively. Various fits looking for deviations of the couplings from the Standard Model predictions are carried out and the results are summarized.

### Summary

**Primary author(s) :** MEYER, Arnd (RWTH Aachen University)
