## Dilaton vs Higgs: Nearly Conformal Physics

*Saturday, 5 July 2014 10:30 (15)*

We consider the model containing a dilaton vs Higgs boson in the nearly conformal sector (NCS). The potential of a dilaton in NCS is linearly rising with distances. The light scalar dilaton would be one of the best candidates to explain the LHC data in recent discovery of a Higgs-like resonance around 125 GeV.
