Search for SUSY with extremely compressed spectra using the ATLAS and CMS detector

Thursday, 3 July 2014 12:00 (20)

Searches that target SUSY with extremely compressed spectra are presented using the ATLAS and CMS detectors. This includes monojet signatures, with or without “c-tagging”, as well as data taken with specially loose trigger conditions during the 8 TeV LHC run in 2012.

Summary

Primary author(s) : MEYER, Arnd (RWTH Aachen University)

Co-author(s) : MOORTGAT, Filip (CERN)

Presenter(s) : Dr. SCHOEFBECK, Robert (HEPHY Vienna)

Session Classification : Beyond the Standard Model

Track Classification : Beyond the Standard Model
