Combination of the Higgs Boson Main Properties Measurements using the ATLAS Detector

Friday, 4 July 2014 15:15 (20)

The combined measurements of the properties of the Higgs boson using the ATLAS detector and up to 25 fb⁻¹ of 7 TeV and 8 TeV pp collision data collected in 2011 and 2012, are discussed.

Summary

Primary author(s) : ATLAS, Collaboration (CERN)

Presenter(s) : Mr. GILLBERG, Dag (CERN)

Session Classification : BEH Physics

Track Classification : Brout-Englert-Higgs physics
