Constraints on dark matter and future observational strategies with gamma-ray space experiments

Friday, 4 July 2014 15:50 (20)

Detection of gamma rays and cosmic rays from the annihilation or decay of dark matter particles is a promising method for identifying dark matter, understanding its intrinsic properties, and mapping its distribution in the universe. I will review recent results from the Fermi Gamma-ray Space Telescope and other space-based experiments, and highlight the constraints these currently place on particle dark matter models. I will also discuss the prospects for indirect searches to robustly identify or exclude a dark matter signal using upcoming data and the comparison with LHC searches

Summary

Primary author(s) : Dr. MORSELLI, Aldo (INFN Roma Tor Vergata)

Presenter(s) : Dr. MORSELLI, Aldo (INFN Roma Tor Vergata)

Session Classification : Astroparticle Physics and Cosmology

Track Classification : Astroparticle Physics and Cosmology
