

Diseño y FEA de la estructura de soporte de la zona delantera en el detector de trazas de ATLAS para el HL-LHC

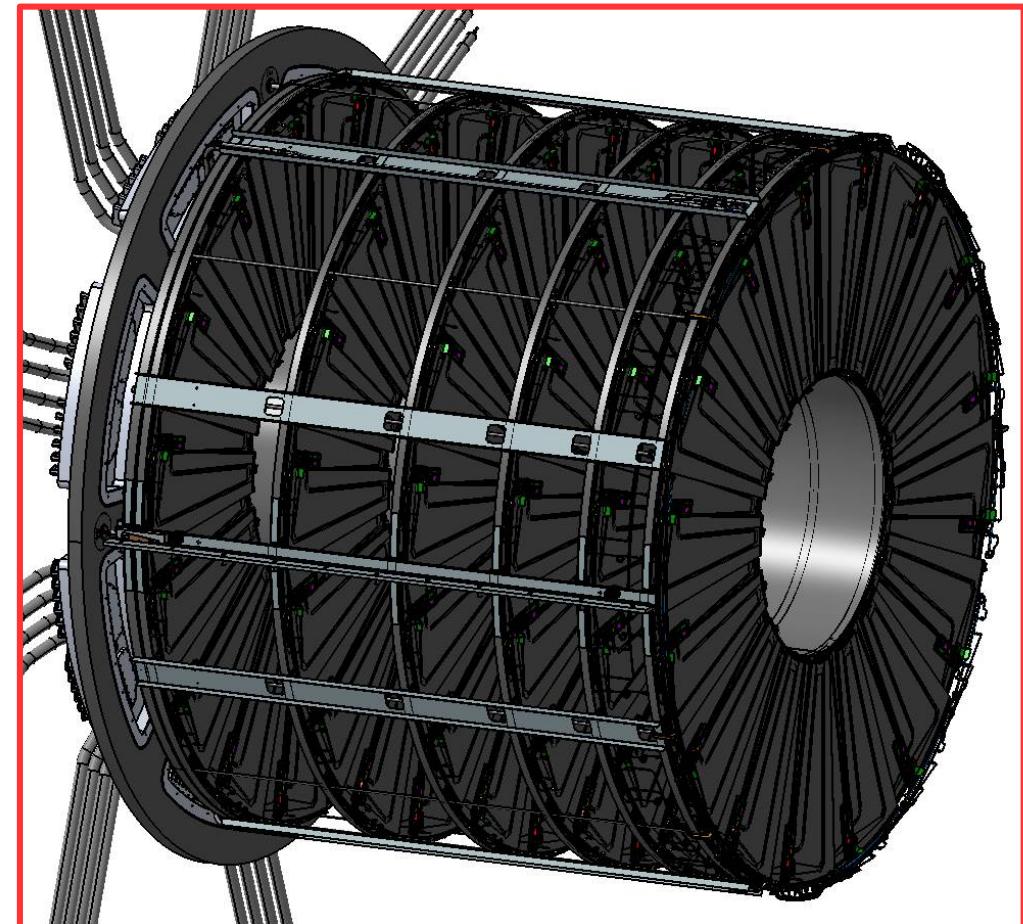

P. Bernabeu, J. V. Civera, C. Lacasta, P. León, A. Platero, M. A. Villarejo

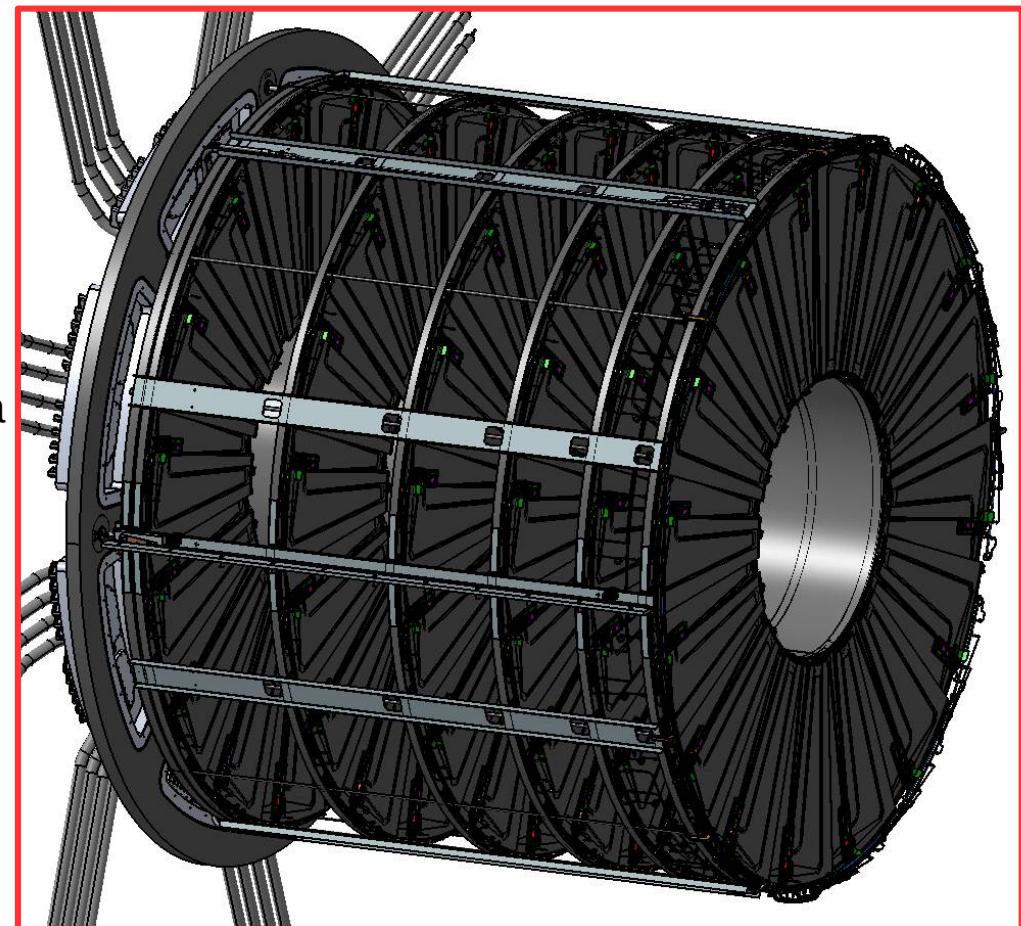

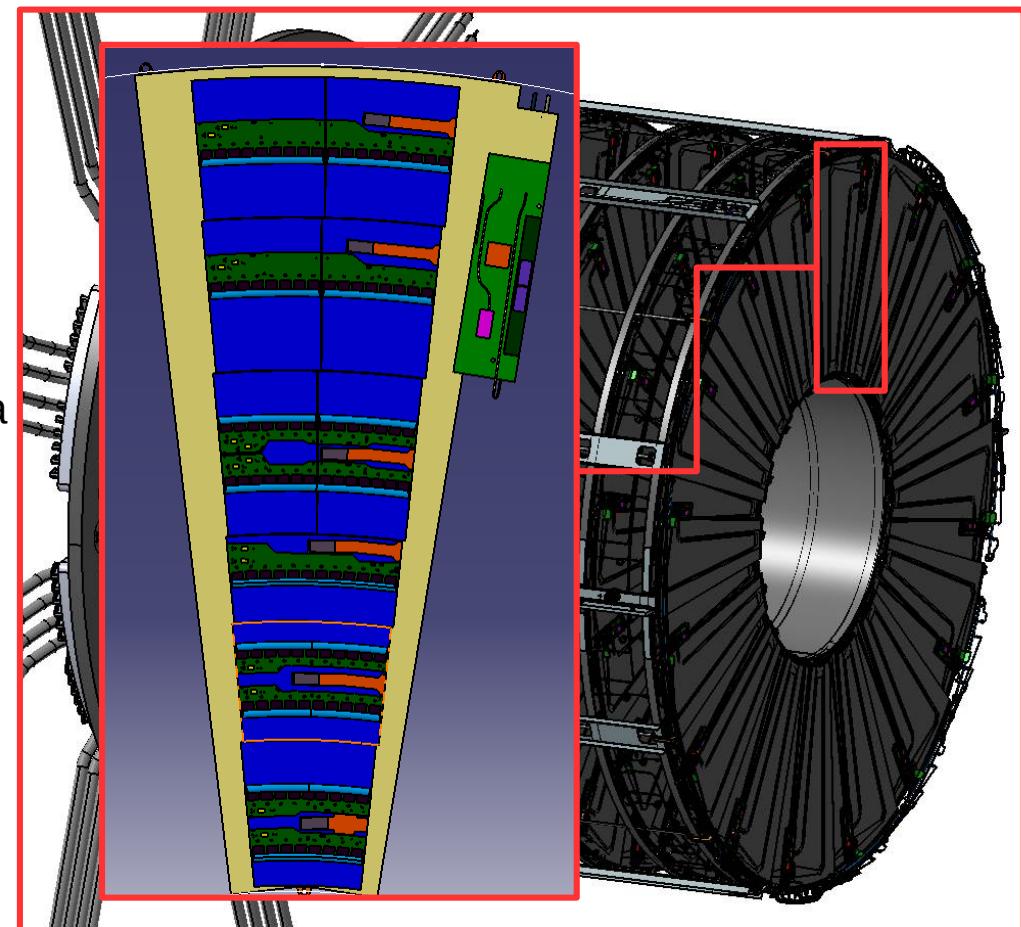

1) Estudio termomecánico de la estructura

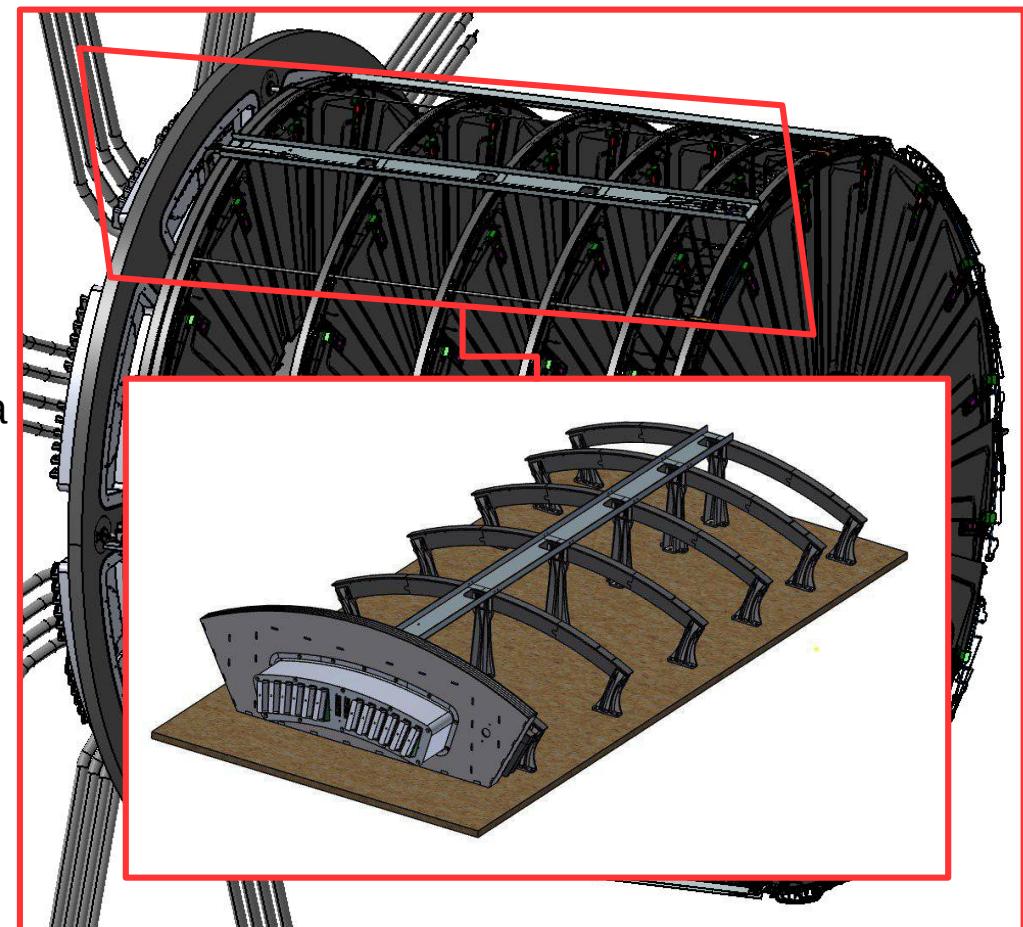

- 1) Estudio termomecánico de la estructura
- 2) Diseño, estudio y test de los pétalos (sensores) Ver charla de Pablo León

Trabajo hecho en el IFIC

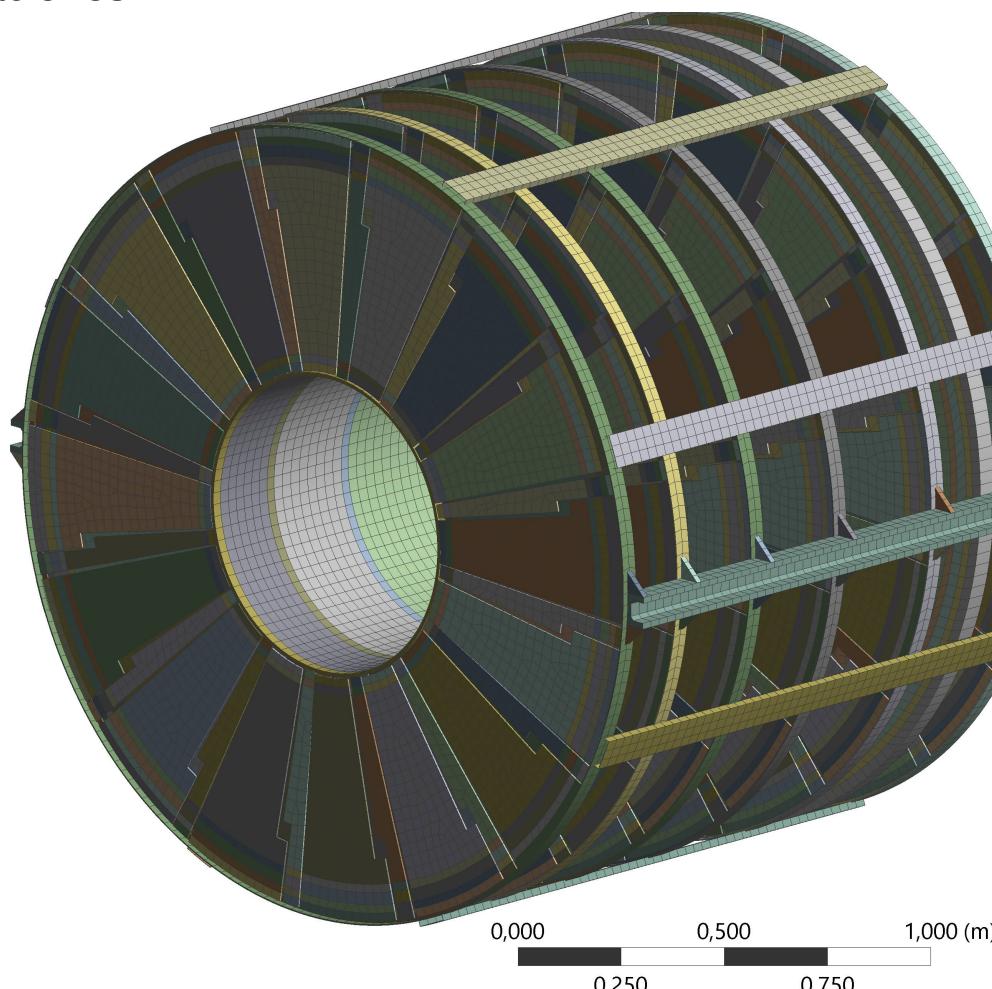

- 1) Estudio termomecánico de la estructura
- 2) Diseño, estudio y test de los pétalos (sensores)
Ver charla de Pablo León
- 3) Diseño, estudio y test de los servicios (cables de potencia y señal)
Ver charla de Adrián Platero

0) Simulaciones

Mesh

08/05/2016 17:36

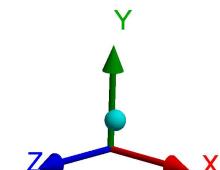

Geometría parametrizada

0,5M elementos en el
mallado

1500 Solidos/superficies

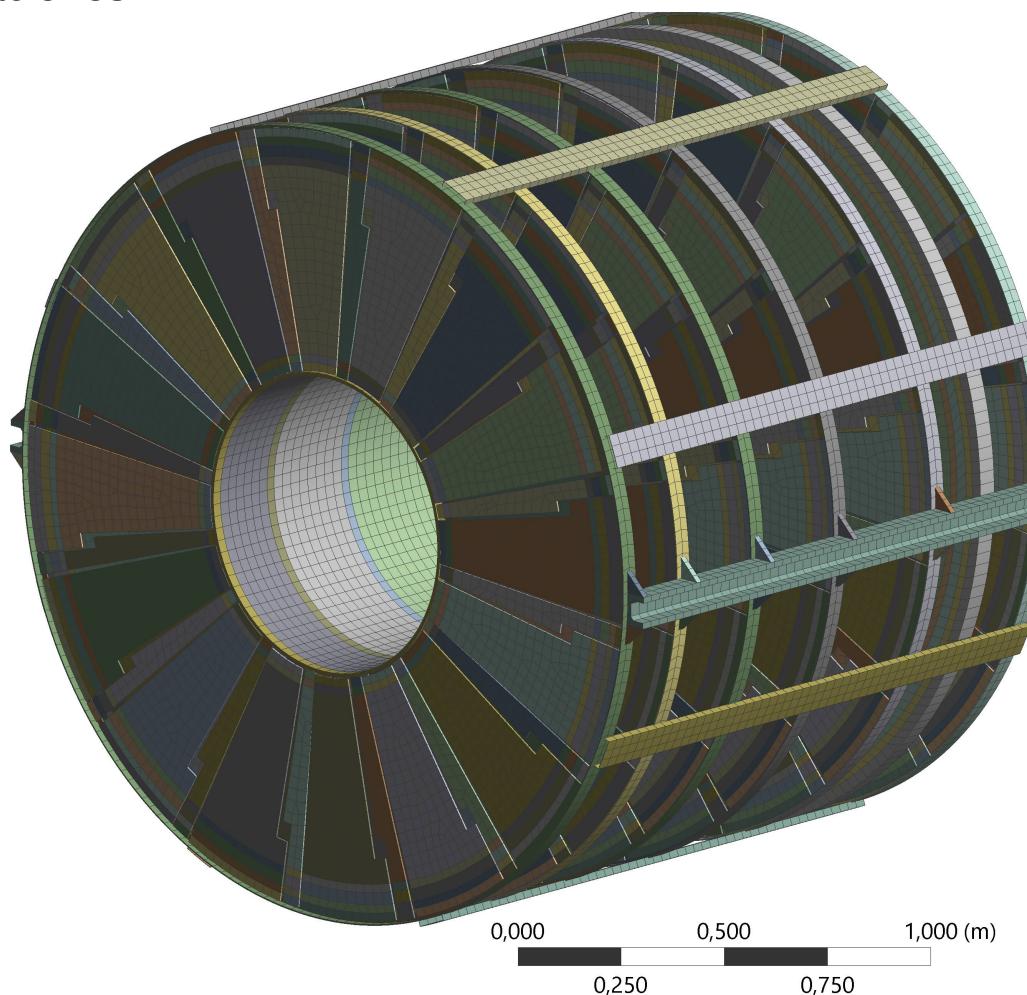

2000 Uniones entre
solidos/superficies

0) Simulaciones

Mesh

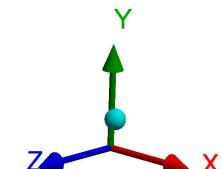

08/05/2016 17:36

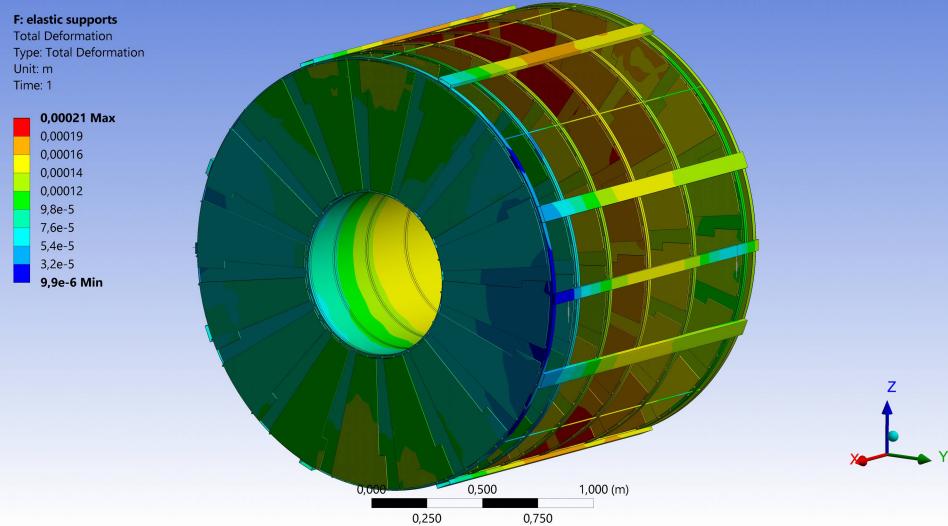

144Gb RAM

24 Dual core a 2,4GHz

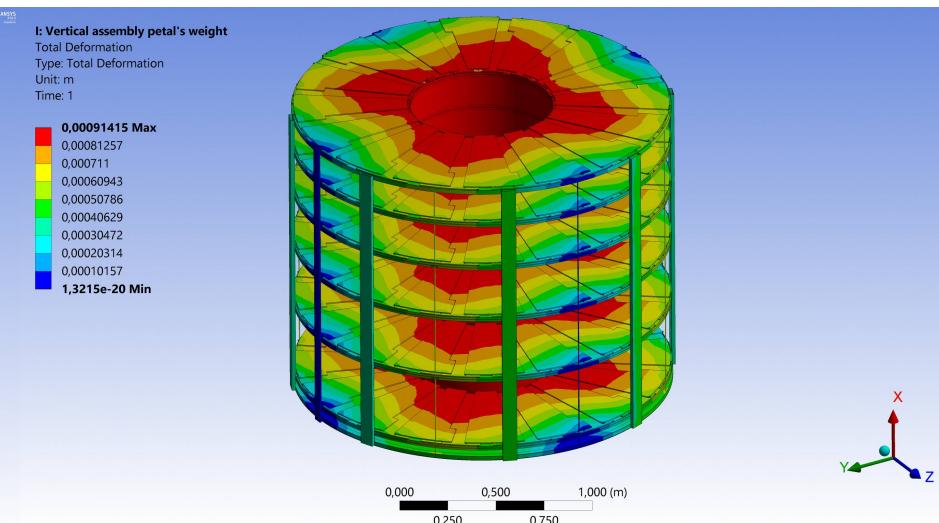

GTX 550Ti

1) Simulaciones estáticas

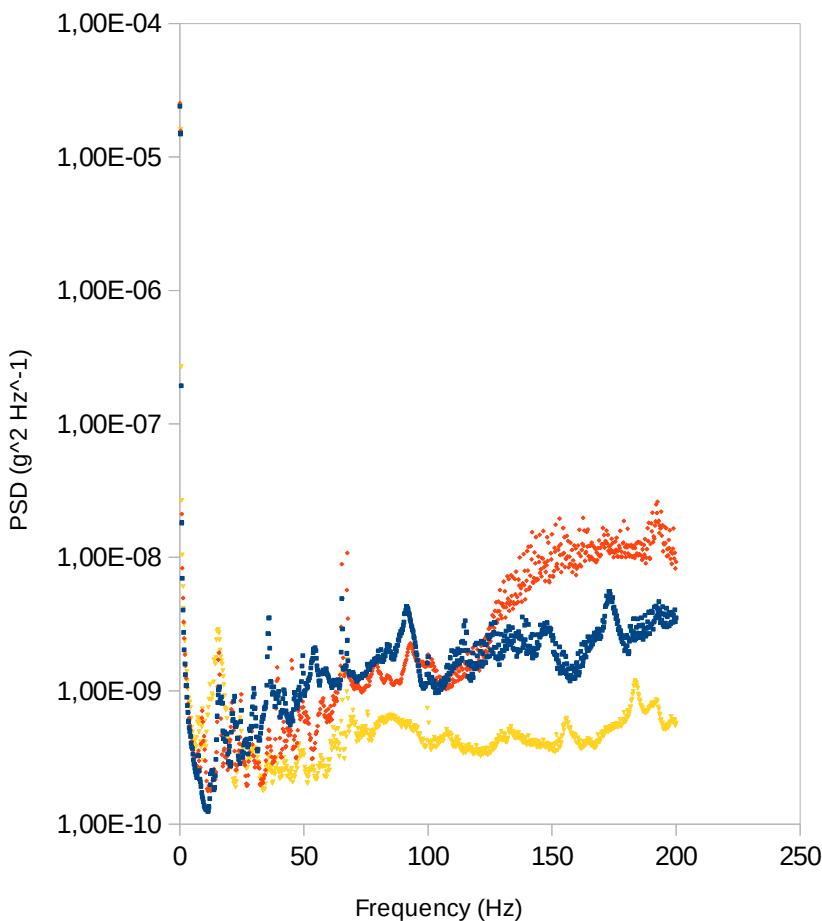

Posición de trabajo horizontal

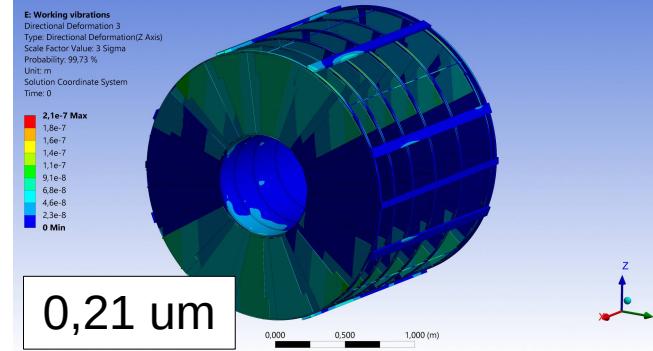

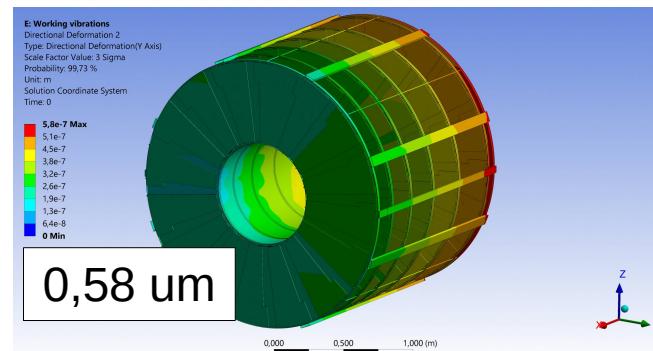

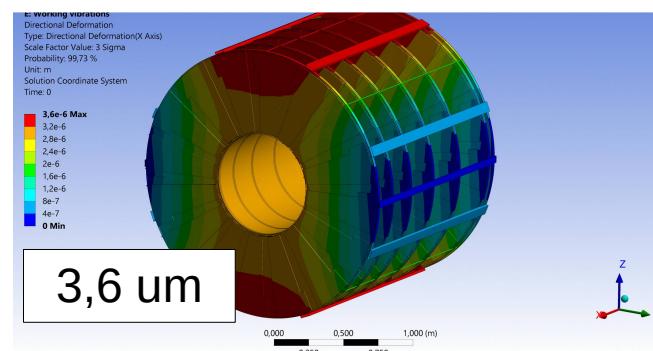

Posición de ensamblado vertical

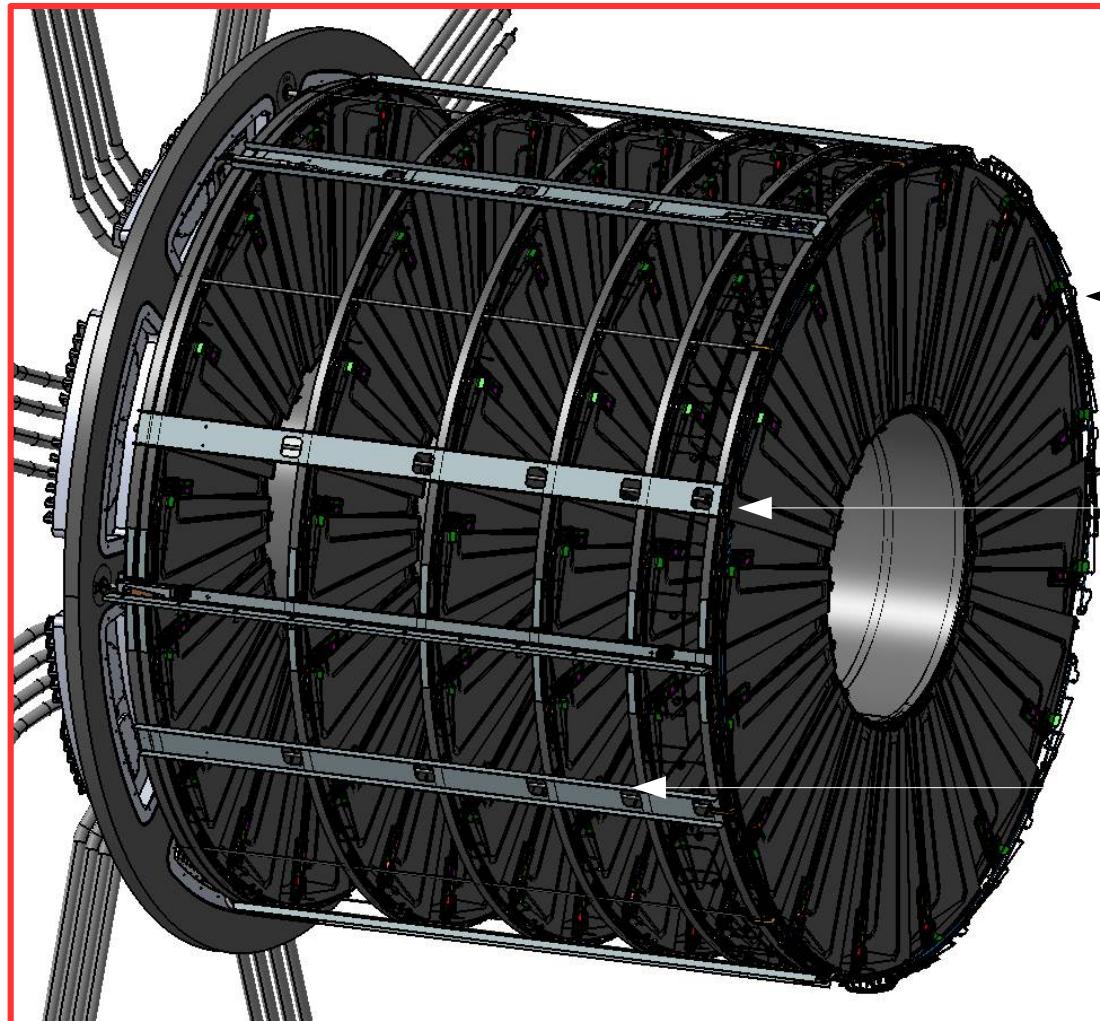

2) Simulaciones dinámicas

Dynamic deformations in X, Y, Z axis by PSD acc. measured in the cavern

3) Simulaciones térmicas

Cada pétalo genera 120W
(32 pétalos por cara)

Tuberías de CO₂ (-40°C)

Los cables generan
200W/m²

3) Simulaciones térmicas
