

Master Majorana neutrino mass parametrization

miércoles, 12 de diciembre de 2018 15:20 (20)

After discussing the general form of a Majorana neutrino mass matrix we will introduce a master parametrization for the Yukawa matrices in agreement with neutrino oscillation data. This parametrization extends previous results in the literature and can be used for any model that induces Majorana neutrino masses with the seesaw mechanism. The application of the master parametrization will be illustrated with several examples.
