- Physics problem: Model-independent searches of New Physics effects (EFT approach) in flavour / LHC / neutrino / nuclear data.
- Minimisation of a likelihood that depends (nonlinearly) on a large number of parameters (Wilson coefficients, hadronic parameters, nuisance parameters, …).
- SMEFT at the LHC (Brehmer et al'18, Freitas et al'19, …)

Example: Electroweak precision measurements in the SMEFT [Falkowski, MGA & Mimouni, 2017]
