

International Masterclasses at IFIC

16 years of particle physics for high school students

- The masterclasses are a whole-day activity where students from different schools gather and analyse real data from particle physics experiments
- Several masterclasses are organised every year, allowing for a total of 275 students
- Some aspects of the logistics and history of the masterclasses at IFIC are reviewed
- A special masterclass for girls only is organised on February 11th
- They are very successful events that appear to motivate students to consider a career in physics
