Martin, you are very much responsible for this success!

Joining forces

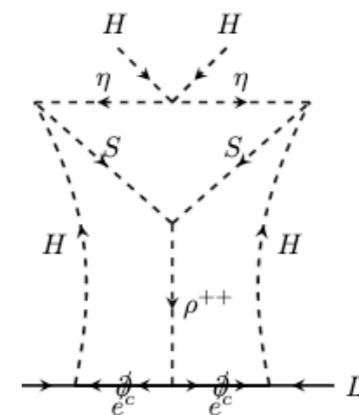

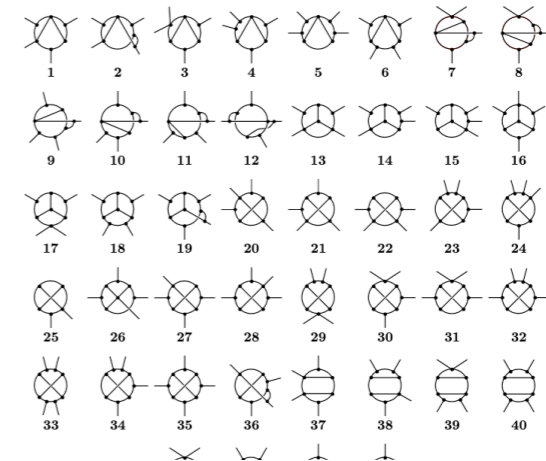

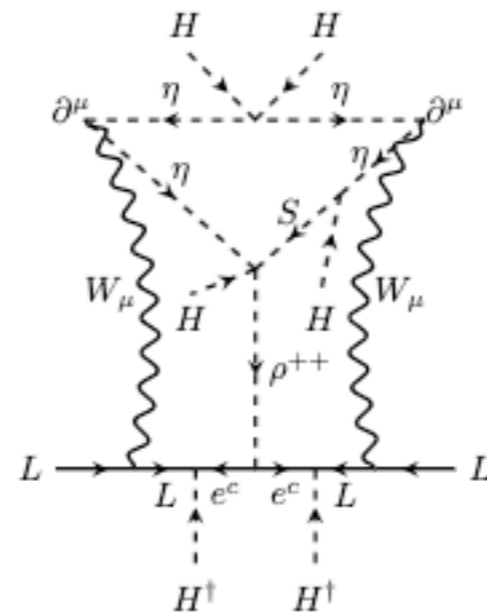

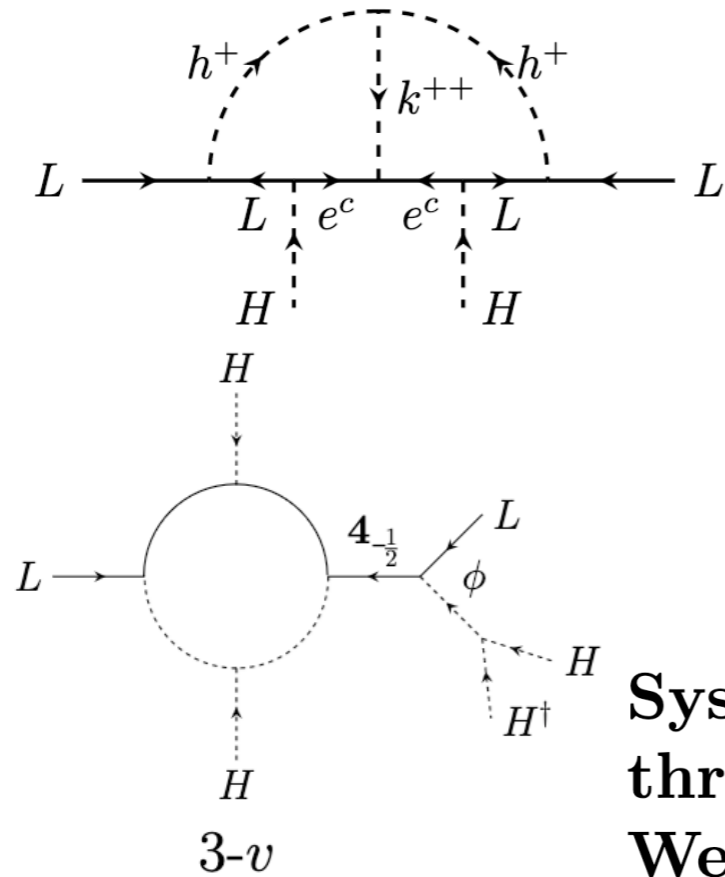

In March 2021, I was part of the thesis defense of Ricardo Cepedello

**Systematic classification of
three-loop realisations of the
Weinberg operator**

Joining forces

In March 2021, I was part of the thesis defense of Ricardo Cepedello

Systematic classification of three-loop realisations of the Weinberg operator

Sooooooooo technical, so thorough and systematic
I was thinking: *This people are crazy, all this effort for just one operator!*
when in SMEFT we have to deal with dozens...

Joining forces

The idea was to use their super-duper diagrammatic approach to match UV theories and SMEFT patterns

which meant overcoming a bunch of technical and conceptual difficulties

Joining forces

The idea was to use their super-duper diagrammatic approach to match UV theories and SMEFT patterns

which meant overcoming a bunch of technical and conceptual difficulties

I confess I do not like difficulties
but thankfully Martin is not me
and despite his seniority he is able to obsess
with getting to the bottom of things

Joining forces

The idea was to use their super-duper diagrammatic approach to match UV theories and SMEFT patterns

which meant overcoming a bunch of technical and conceptual difficulties

I confess I do not like difficulties
but thankfully Martin is not me
and despite his seniority he is able to obsess
with getting to the bottom of things

To me, Martin embodies the very rare combination of lots of experience with the stamina and grit of a PhD student

SMEFT community, here we go!

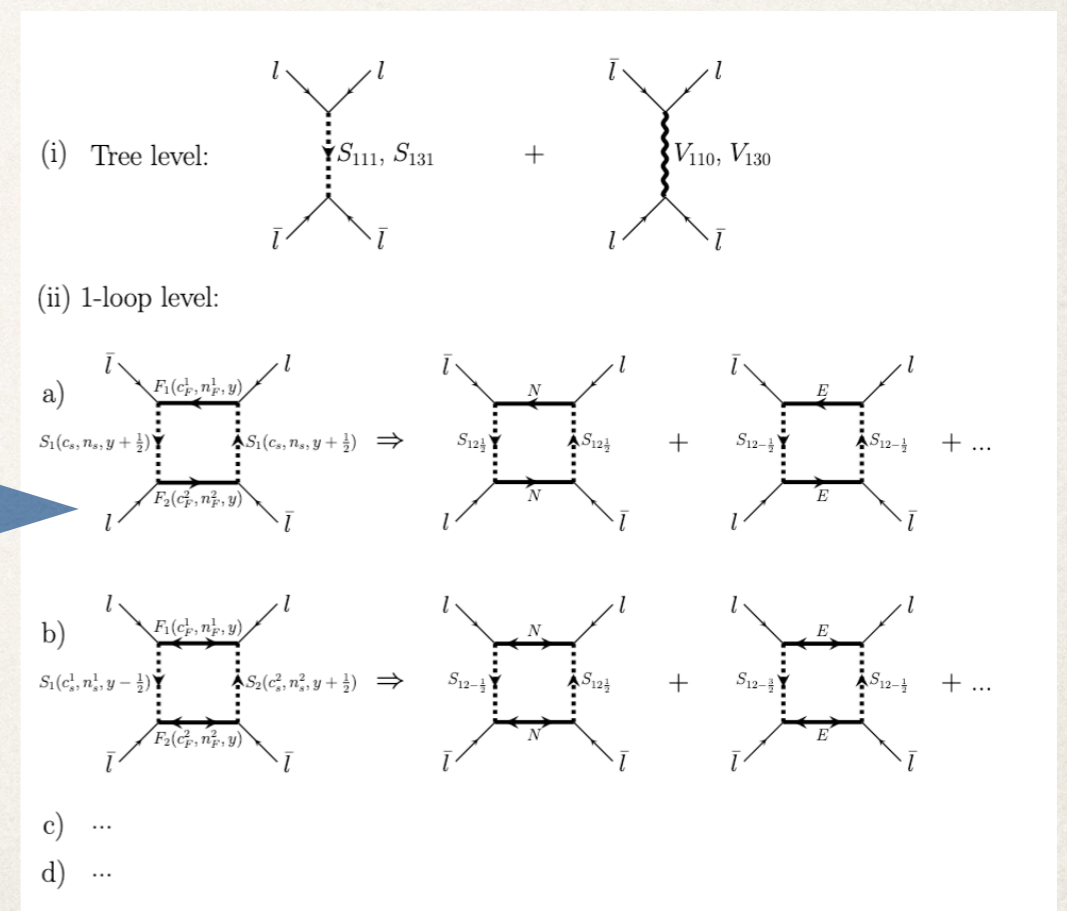

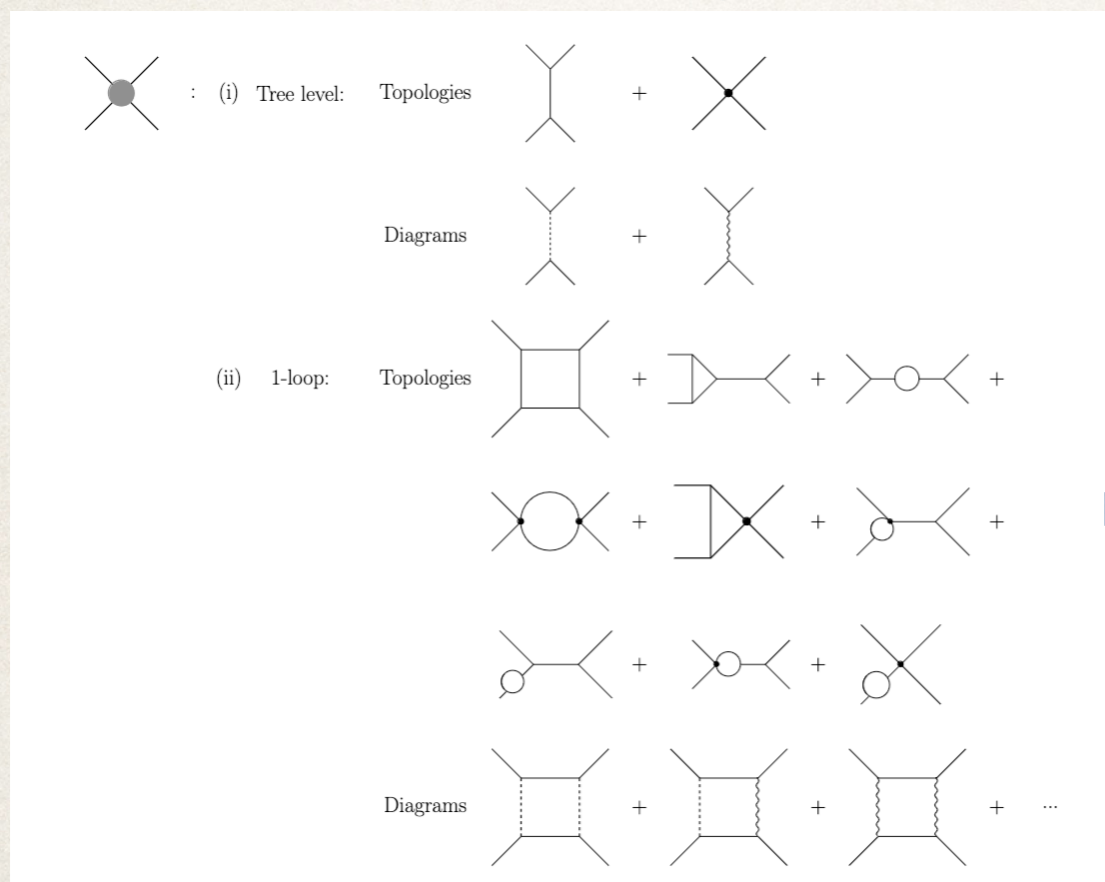

Now we had a hammer and needed a nail to hit
My PhD student Fabian Esser joined in,
became Martin's student

There are so many aspects to the SMEFT that we had to find
the best first application

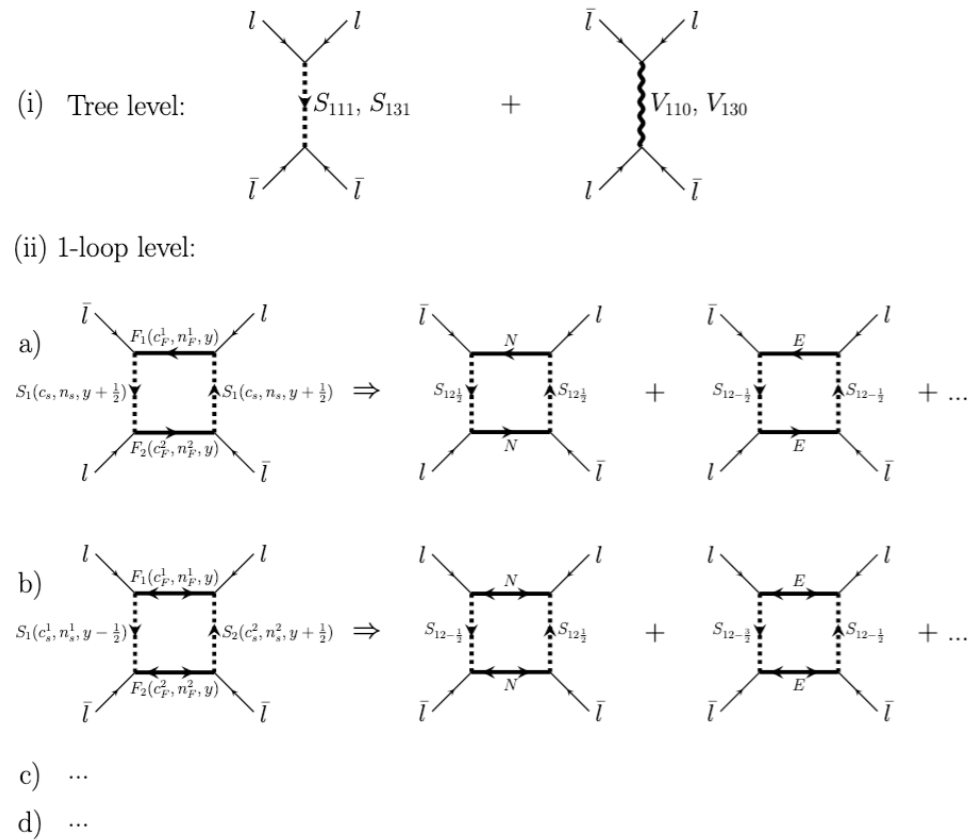

4F operators

to pheno

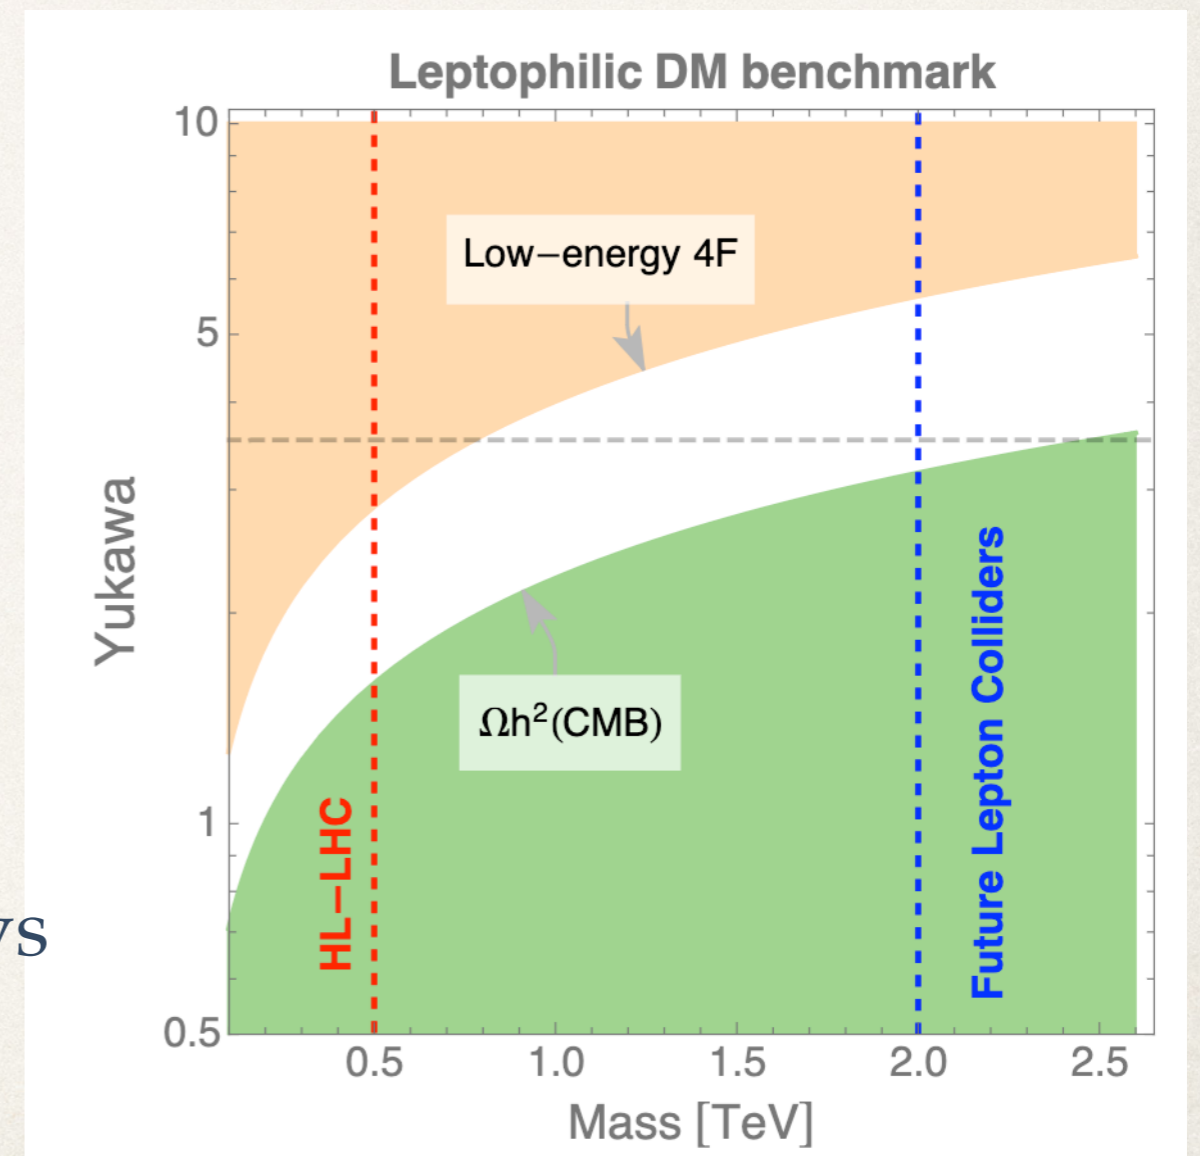

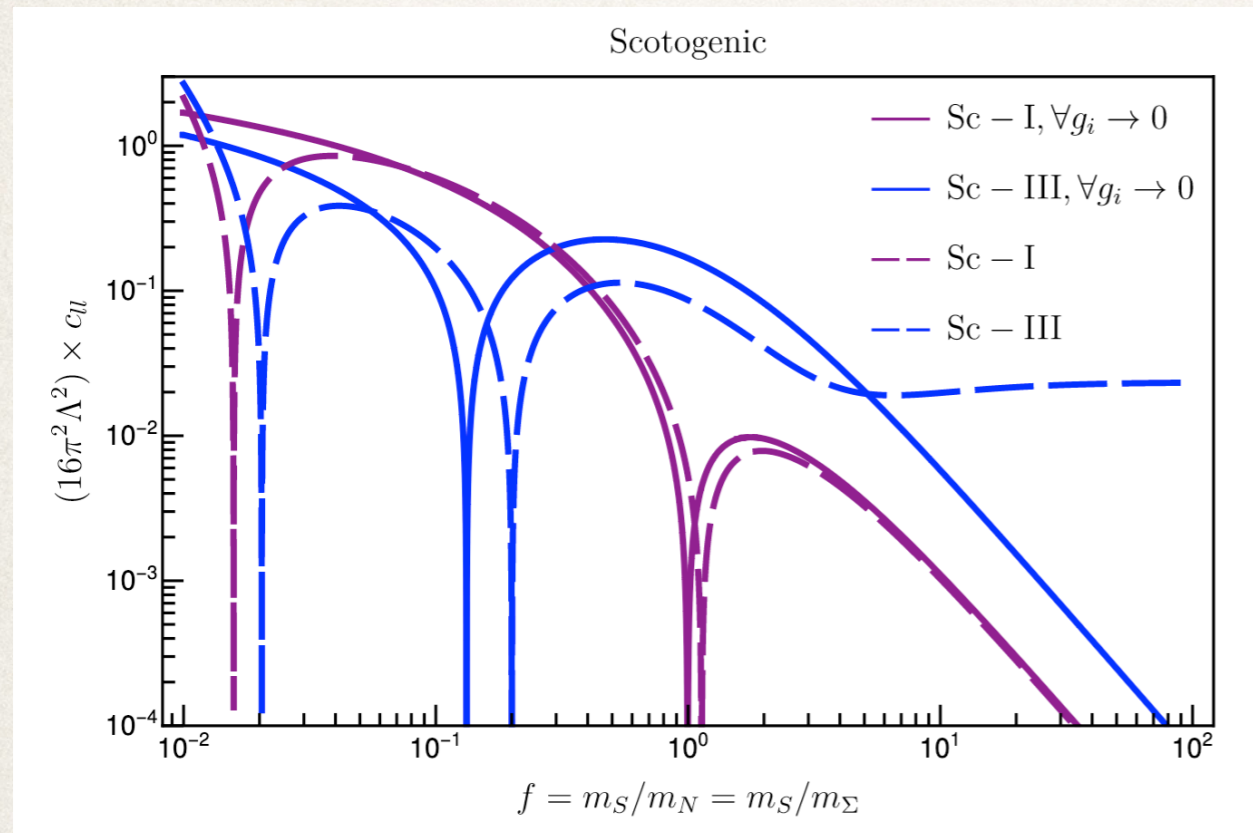

to benchmarks

Operator	General expression	Equal mass limit
c_{ll}	$-\frac{1}{8} \frac{1}{16\pi^2} \frac{ \lambda_E ^4}{m_E^2}$	$-\frac{1}{8} \frac{1}{16\pi^2} \frac{ \lambda_E ^4}{\Lambda^2}$
$c_{lq}^{(1)}$	$\frac{1}{8} \frac{1}{16\pi^2} \frac{ \lambda_E ^2 \lambda_U ^2 \log\left(\frac{m_E^2}{m_U^2}\right)}{m_E^2 - m_U^2}$	$\frac{1}{8} \frac{1}{16\pi^2} \frac{ \lambda_E ^2 \lambda_U ^2}{\Lambda^2}$
$c_{lq}^{(3)}$	$-\frac{1}{8} \frac{1}{16\pi^2} \frac{ \lambda_E ^2 \lambda_U ^2 \log\left(\frac{m_E^2}{m_U^2}\right)}{m_E^2 - m_U^2}$	$-\frac{1}{8} \frac{1}{16\pi^2} \frac{ \lambda_E ^2 \lambda_U ^2}{\Lambda^2}$
$c_{qq}^{(1)}$	$-\frac{1}{16} \frac{1}{16\pi^2} \frac{ \lambda_U ^4}{m_U^2}$	$-\frac{1}{16} \frac{1}{16\pi^2} \frac{ \lambda_U ^4}{\Lambda^2}$
$c_{qq}^{(3)}$	$-\frac{1}{16} \frac{1}{16\pi^2} \frac{ \lambda_U ^4}{m_U^2}$	$-\frac{1}{16} \frac{1}{16\pi^2} \frac{ \lambda_U ^4}{\Lambda^2}$

Adding DM to the mix

Adds more handles to the UV models and changes the SMEFT patterns

Searching for good benchmarks is
Ariadne's job

Martin's experience with the many ways
a model fails guided us all the way

Mas difícil todavía!

Now we are looking at an even more difficult question:
triple neutral gauge couplings

After months and months,
Martin and Ricardo realised the
common-lore was wrong...

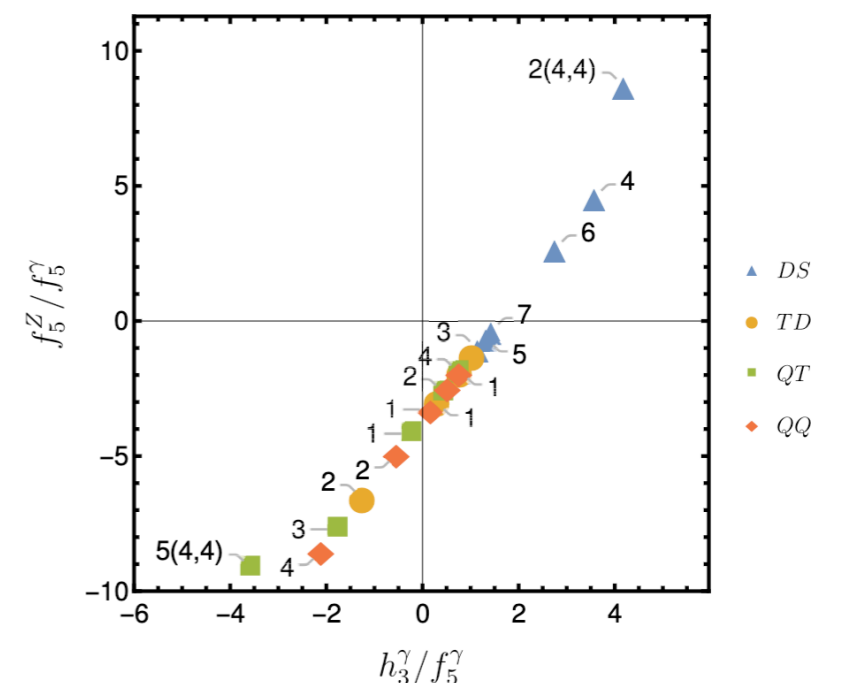

Corrected it and moved onto
what experiments can do

$$\tilde{c}_{DB\tilde{B}} = \frac{1}{160}(-1)^{(\mathbf{r}_1 \bmod 2)} \text{sgn}(y_2^2 - y_1^2) \sqrt{2\mathbf{r}_1\mathbf{r}_2} \left(y_1^2 + y_2^2 + \frac{4}{3}y_2y_1 \right), \quad (3.14)$$

$$\tilde{c}_{DW\tilde{W}} = \frac{1}{160}(-1)^{(\mathbf{r}_1 \bmod 2)} \text{sgn}(y_2^2 - y_1^2) \sqrt{2\mathbf{r}_1\mathbf{r}_2} \frac{1}{12} \left[(\mathbf{r}_1^2 - 1) + (\mathbf{r}_2^2 - 1) + \frac{4}{3}(\mathbf{r}_1\mathbf{r}_2 - 2) \right],$$

$$\tilde{c}_{DW\tilde{B}} = \frac{1}{48}(-1)^{(\mathbf{r}_1 \bmod 2)} \sqrt{2\mathbf{r}_1\mathbf{r}_2} \frac{1}{12} (y_1 + y_2) \left[(\mathbf{r}_1 + \mathbf{r}_2) + \frac{3}{5}(y_1 - y_2) \right],$$

$$\tilde{c}_{DB\tilde{W}} = \tilde{c}_{DW\tilde{B}}.$$

Wrapping up

Martin, belated happy birthday

Thanks for guiding Fabian through difficulties,
for your patience discussing physics with me,
and for keeping your tireless and passionate
obsession for finding the solution

Please, don't change!
