## Potential areas of interest of the GRID and e-Science Group at IFIC in the Technology Transfer

*Monday, 24 June 2013 17:45 (15)*

The Group of GRID Computing and e-Science at IFIC has developed their activities since 1999. The main and continuous commitment has been the development, installation and deployment of an GRID Infrastructure for the ATLAS Experiment: the Spanish ATLAS Tier-2. Some important details and achievements will be given. On the other hand, the Group has been involved in several ICT projects mainly related to the EU Framework Programs. Another projects and collaboration agreements have been in the basis of the daily work of the Group.

The expertise obtained from the exercise of this period of 14 years will be summarized: the installation, maintenance and operation of a Distributed Computing Infrastructure (GRID), the involvement in middleware tests, the User Support activities, migration and porting of scientific applications to the GRID environment, software developments, etc.

Finally it will be listed the main areas of interest from the point of view of the Technology Transfer trying to identify potential interactions in the private and public sectors
